En mikronett er et selvstendig elektrisk nettverk som kan operere enten tilkoblet det offentlige stromnettet eller i en uavhengig "oy"-modus. Med denne kapasiteten kan du produsere egen strøm

Utsira is an island located outside Haugesund. It has both solar (PV) and large penetration of wind power production but is mainly supplied from the mainland by ageing subsea cables. The island can

Senteret skal bidra til å akselerere utviklingen av smartgrids i Norge for derigjennom å redusere investeringsbehovet for konvensjonelle tiltak

A microgrid is a decentralised grid which can disconnect from the main electricity grid and structure it into "local sub-grids that manage their power and energy balancing." [1] The three main benefits of

There is more to the energy transition in Norway than meets the eye, with startups and legacy firms alike in the mix.

The main objective of the doctoral position is to develop and enable the distributed "energy hubs" for a modular, scalable, and robust microgrid. The "energy hub" will consist of multi-port

The economics of setting up urban microgrids at the site has been evaluated and the results show that it makes economic case to install microgrids to improve the utilization of distribution infrastructure laid

This paper presents vehicle-to-grid (V2G) tests performed in the microgrid at university Campus Evenstad, Norway. The purpose of the tests was to investigate the power quality in the

Supported by This report on Urban Microgrids as an Enabler for Distribution Network in the licensee area of BRPL was prepared for Innovation Norway, Commercial Section, Royal Norwegian Embassy

This research analyzes the optimization of a hydro plant, wind turbines, and photovoltaic (PV) panels with a

Microgrids norway

careful examination of three scenarios in the Hinnoya region, Norway.

In Norway, microgrid pilots are being developed in rural areas as an alternative to traditional grid investments, e.g. postponing reinvestment in subsea cables to islands, to ensure reliability of ...

This dataset contains timeseries for Rye Microgrid, Trondheim, Norway. The timeseries include solar and wind power generation, consumption and historical weather forecasts.
